

# 3D-GIS for iPad

- Unleash the power of the cloud – create the 3D scene on the server
- Create 3D environment from existing GIS data (spatial files, spatial databases, etc.)
- Support vector and raster data representation in the 3D web environment
- Complete above and underground 3D environment including structures, roads, infrastructures, etc.
- Innovative subterranean managerial views allowing effective and efficient coordination of infrastructure design and works
- Explore and analyze data in 3D
- Import 2D/3D objects, symbols and georeferenced information layers
